

**Remote Control and Safety Upgrades at the  
Yarragadee MOBLAS-5 Station**

Randall Carman

Geoscience Australia.

Abstract

To enable the efficient operation of the MOBLAS SLR system at Yarragadee in conjunction with the Auscope VLBI equipment, several enhancements have needed to have been made. Many of these modifications have also improved operator safety and job satisfaction, but have not impacted at all on the MOBLAS data quality standards. This poster will indicate the changes made to the standard MOBLAS system at Yarragadee.
